

Evluent™ PostureRight™ Wrist Support

Reduces forearm twisting

Ordinary keyboard wrist supports are flat on top to support your hands flat on the keyboards. Your forearms are twisted out of their neutral positions in the same way a forearm is [twisted](#) when holding an ordinary mouse. Also, only small areas of the hands contact the wrist support, which causes uncomfortable pressure points. The Evluent PostureRight Wrist Support solves the problem with a contoured surface which reduces forearm twisting and increases the contact areas for greater comfort. (Patents pending.)

Features and Benefits

- Contoured to reduce forearm twisting.
- Provides the main benefit of a split keyboard but allows you to use a flat keyboard.
- Increases the contact areas under your wrists to reduce pressure points.
- Soft gel filling.
- Smooth fabric surface.
- Non-slip bottom.
